Activity and/or results (200 words, you can include figures/tables)

The workshop named “Dynamics of Beaches and their threats” was held in Songkhla. This event was the pioneer workshop under ADAP-T project set for local people and local organizations. The objective is trying to build up their capacity in terms of coastal disasters related to natural phenomena and human induced as well as the adaptive countermeasures. Small exhibition such as posters and model of wave basin were set for education. The overview of existing coastal condition all over Thailand were introduced at the beginning, followed by the concept of coastal dynamics. Young citizens who volunteered themselves to beach monitoring project presented the beach morphology change under their observations in 3 locations in Songkhla. Threats to beaches were presented not only in Songkhla beaches but also in other places with the same context. Local people realized that the most serious threat to beaches caused by human activities. Some countermeasures to cope with these issues were also introduced. All participants shared their ideas after workshop by dividing into 6 groups. All participants were impressed with this workshop and would like to distribute what they have learnt to their communities.
